

Task Manager REST API Project

Unathi Vayeke

Full-Stack Development Task 1

Project Description

This project is a Task Manager REST API built using Node.js, Express, and MongoDB. It allows users to perform CRUD operations on tasks, including creating, reading, updating, and deleting tasks. The API follows RESTful principles and is structured using controllers, routes, and models. It was tested using Postman to ensure all endpoints function correctly.

Level 1 Task 2: Build a Simple REST API

Develop a simple REST API using Node.js with Express. Create basic CRUD (Create, Read, Update, Delete) operations on a resource such as users or products.

Objectives

- Set up an Express server.
- Create API routes for CRUD operations.
- Use Postman or Thunder Client to test API endpoints.
- Handle errors and return proper HTTP responses.
